From BCNF to 3NF

● Facts

- WeChat: cstutorcs
Assignment Project Exam Help
Email: tutors@163.com
- (1) There exists an algorithm that can generate a **lossless decomposition into BCNF**.
 - (2) However, a BCNF-decomposition that is **both lossless and dependency-preserving** does not always exist.

QQ: 749389476

<https://tutorcs.com>

- 3NF is a **less restrictive normal form** such that a lossless and dependency preserving decomposition can always be found.

程序代写代做 CS编程辅导

3NF - Definition

- A relation schema R is in 3NF if whenever a non-trivial FD $X \rightarrow A$ holds in R , then X is a **superkey** or A is a **prime attribute**.

Assignment Project Exam Help

- 3NF allows data redundancy but excludes relation schemas with certain kinds of FDs (i.e., partial FDs and transitive FDs).

Normalisation to 3NF

- Consider the following ENROL:

- {StudentID, CourseNo, Semester} → {ConfirmedBy_ID, StaffName};
- {ConfirmedBy_ID} → {StaffName}.

WeChat: cstutors

StudentID	CourseNo	Semester	ConfirmedBy_ID	StaffName
123456	COMP2400	2010 S2	u12	Jane
123458	COMP2400	2008 S2	u13	Linda
123458	COMP2600	2008 S2	u13	Linda

Assignment Project Exam Help

Imperial tutors@163.com

- Is ENROL in 3NF?

QQ: 749389476

- {StudentID, CourseNo, Semester} is the only key.
- ENROL is not in 3NF because {ConfirmedBy_ID} → {StaffName}, {ConfirmedBy_ID} is not a superkey and {StaffName} is not prime attribute.

https://tutors.com

程序代写代做 CS编程辅导

Normalisation to 3NF

- **Algorithm** for a dependency preserving and lossless 3NF-decomposition

Input: a relation schema R and a set Σ of FDs on R .

Output: a set \mathcal{S} of relation schemas in 3NF, each having a set of FDs

- Compute a **minimal cover** Σ' for Σ and start with $\mathcal{S} = \phi$
- Group FDs in Σ' by their left-hand-side attribute sets
- For each distinct left-hand-side X of FDs in Σ' that includes $X_i \rightarrow A_1, X_i \rightarrow A_2, \dots, X_i \rightarrow A_k$:
 - Add $R_i = X \cup \{A_1\} \cup \{A_2\} \cup \dots \cup \{A_k\}$ to \mathcal{S}
- Remove all redundant ones from \mathcal{S} (i.e., remove R_i if $R_i \subseteq R_j$)
- if \mathcal{S} does not contain a superkey of R , add a key of R as R_0 into \mathcal{S} .
- Project the FDs in Σ' onto each relation schema in \mathcal{S}

程序代写代做 CS编程辅导 Minimal Cover – The Hard Part!

- Let Σ be a set of FDs. A **minimal cover** Σ_m of Σ is a set of FDs such that

- Σ_m is equivalent to Σ , i.e., start with $\Sigma_m = \Sigma$;
- Dependent:** each FD in Σ_m has only a single attribute on its right hand side, i.e., replace each FD $X \rightarrow \{A_1, \dots, A_k\}$ in Σ_m with $X \rightarrow A_1, \dots, X \rightarrow A_k$;
- Determinant:** each FD has as few attributes on the left hand side as possible, i.e., for each FD $X \rightarrow A$ in Σ_m , check each attribute B of X to see if we can replace $X \rightarrow A$ with $(X - B) \rightarrow A$ in Σ_m ;
- Remove a FD from Σ_m if it is redundant.

Minimal Cover

● Theorem:

The minimal cover of a set of functional dependencies Σ always exists but is not necessarily unique.

WeChat: cstutorcs

Assignment Project Exam Help

● Examples: Consider the following set of functional dependencies:

$$\Sigma = \{A \rightarrow BC, B \rightarrow C, B \rightarrow A, C \rightarrow AB\}$$

Σ has two different minimal covers:

- $\Sigma_1 = \{A \rightarrow B, B \rightarrow C, C \rightarrow A\}$
- $\Sigma_2 = \{A \rightarrow C, C \rightarrow B, B \rightarrow A\}$

Email: tutors@163.com

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导 Minimal Cover - Examples

- The set $\{A \rightarrow B, B \rightarrow C\}$ can be reduced to $\{A \rightarrow B, B \rightarrow C\}$, because $\{A \rightarrow C\}$ is the other two.
- Given the set of FDs $\Sigma = \{B \rightarrow A, D \rightarrow A, AB \rightarrow D\}$, we can compute the minimal cover of Σ as follows:

- 1 start from Σ ;
- 2 check whether all the FDs in Σ have only one attribute on the right hand side (look good);
- 3 determine if $AB \rightarrow D$ has any redundant attribute on the left hand side ($AB \rightarrow D$ can be replaced by $B \rightarrow D$);
- 4 look for a redundant FD in $\{B \rightarrow A, D \rightarrow A, B \rightarrow D\}$ ($B \rightarrow A$ is redundant);

Therefore, the minimal cover of Σ is $\{D \rightarrow A, B \rightarrow D\}$.

程序代写代做 CS编程辅导 Normalisation to 3NF – Example

- Consider ENROL as follows:
 - {StudentID, CourseNo, Semester} → {ConfirmedBy_ID, StaffName}
 - {ConfirmedBy_ID} → {StaffName}

WeChat: cstutorcs

<u>StudentID</u>	<u>CourseNo</u>	<u>Semester</u>	ConfirmedBy_ID	StaffName
...

Assignment Project Exam Help

- Can we normalise ENROL into 3NF by a lossless and dependency preserving decomposition?

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导 Normalisation to 3NF – Example

- Consider ENROL again:
 - $\{\text{StudentID}, \text{CourseNo}, \text{Semester}\} \rightarrow \{\text{ConfirmedBy_ID}, \text{StaffName}\}$
 - $\{\text{ConfirmedBy_ID}\} \rightarrow \{\text{StaffName}\}$

WeChat: cstutors

<u>StudentID</u>	<u>CourseNo</u>	<u>Semester</u>	ConfirmedBy_ID	StaffName
...

Assignment Project Exam Help

- A **minimal cover** is $\{\{\text{StudentID}, \text{CourseNo}, \text{Semester}\} \rightarrow \{\text{ConfirmedBy_ID}\}, \{\text{ConfirmedBy_ID}\} \rightarrow \{\text{StaffName}\}\}$.

- Hence, we have:
 - $R_1 = \{\text{StudentID}, \text{CourseNo}, \text{Semester}, \text{ConfirmedBy_ID}\}$ with $\{\text{StudentID}, \text{CourseNo}, \text{Semester}\} \rightarrow \{\text{ConfirmedBy_ID}\}$
 - $R_2 = \{\text{ConfirmedBy_ID}, \text{StaffName}\}$ with $\{\text{ConfirmedBy_ID}\} \rightarrow \{\text{StaffName}\}$
 - Omit R_0 because R_1 is a superkey of ENROL.

程序代写代做 CS编程辅导 3NF - Exercises

- Let us do some exercises on the 3NF-decomposition algorithm.

- Exercise 1:** $R = \{A, B, C, D\}$ and $\Sigma = \{A \rightarrow B, B \rightarrow C, AC \rightarrow D\}$:

- $\{A \rightarrow B, B \rightarrow C, A \rightarrow D\}$ is a minimal cover.
- $R_1 = ABD, R_2 = BC$ (omit R_0 because R_1 is a superkey of R)
- The 3NF-decomposition is $\{ABD, BC\}$.

- Exercise 2:** $R = \{A, B, C, D\}$ and $\Sigma = \{AD \rightarrow B, AB \rightarrow C, C \rightarrow B\}$:

- Σ is its own minimal cover.
- $R_1 = ABD, R_2 = ABC, R_3 = CB$ (omit R_3 because $R_3 \subseteq R_2$ and omit R_0 because R_1 is a superkey of R)
- The 3NF-decomposition is $\{ABD, ABC\}$.
