## What is SQL?

- **SQL** stands for **S**tructural **Q**uery **L**anguage
- SQL was initially developed by IBM (SEQUEL → SQL), as one of the first commercial languages for the relational data model.
  - 1986 – SQL was standardised by ANSI and ISO (↪ **SQL-86**).
  - 1989 – SQL was revised (↪ **SQL-89**).
  - 1992 – SQL was strengthened and much expanded (↪ **SQL-92**).
  - 1999 – SQL was expanded and divided into a core specification plus optional specialised packages (↪ **SQL:1999**).
  - 2003 – SQL was further expanded, e.g., XML support (↪ **SQL:2003**).
  - 2011 — SQL was further expanded, e.g., improved support for temporal databases (↪ **SQL:2011**).

程序代写代做 CS编程辅导

## What is SQL?

- SQL provides an interface to relational database systems, including:

- Data Manipulation Language (DML);

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

- Data Control Language (DCL);

QQ: 749389476

- Transaction Control Language (TCL)

<https://tutorcs.com>

## 程序代写代做 CS编程辅导 Relational Data Model and SQL

- Unlike the relational model that is based on **sets**, SQL is based on **multisets**. It means a relation can have duplicate tuples.

Relation name  
(Table name)

Attribute (Column)

## Data Definition Language – Create Table

- The **CREATE TABLE** statement is used to create a new relation schema by specifying its name, **id**, and, *optionally*, its constraints.

```
CREATE TABLE table_name  
    (attribute_name data_type [attribute constraints],  
    ...,  
    attribute_name data_type [attribute constraints],  
    [table constraints]);
```

WeChat: cstutorcs  
Assignment Project Exam Help  
Email: tutorms@163.com

- For each attribute in a relation, we specify its name, its type and, *optionally*, a constraint specific to the attribute (i.e., attribute constraint).

```
attribute_name data_type [attribute_constraint]
```

QQ: 749389476  
<https://tutorms.com>

## 程序代写代做 CS编程辅导 Create Table – Example

```
CREATE TABLE STUDENT  
(StudentID INT  
Name VARCHAR(100),  
DoB Date,  
Email VARCHAR(100));
```

StudentID	Name	DoB	Email
-----------	------	-----	-------

WeChat: cstutorcs

```
CREATE TABLE COURSE
```

```
(No VARCHAR(20),  
Cname VARCHAR(50),  
Unit SMALLINT);
```

Assignment Project Exam Help

No	Cname	Unit
----	-------	------

Email: tutorms@163.com

```
CREATE TABLE ENROL
```

```
(StudentID INT,  
CourseNo VARCHAR(20),  
Semester VARCHAR(50),  
Status VARCHAR(50));
```

QQ: 749389476

StudentID	CourseNo	Semester	Status

## Attribute Data Types

### ● Numeric types:

- **INT** and **SMALLINT** define domains of integer numbers of various sizes.
- **FLOAT** or **REAL**, and **DOUBLE PRECISION** provide floating point numbers of various precision.
- **NUMERIC(i,j)** or **DECIMAL(i,j)** provide fixed point numbers with parameters *precision i* and *scale j*:
  - **precision** for the total number of digits,
  - **scale** for the number of digits following the decimal point.

### ● String types:

- **CHAR(n)** allows character strings of fixed length, where *n* is the number of characters.
- **VARCHAR(n)** allows character strings of varying length, where *n* is the maximum number of characters.
- **BIT(n)** allows bit strings of fixed length, where *n* is the number of bits.
- **BIT VARYING(n)** allows bit strings of varying length, where *n* is the maximum number of bits.

## Attribute Data Types

### ● Date and time types

- **DATE** provides **cl** (year, month, day).
- **TIME** provides **t** (hour, minute, second).
- **TIMESTAMP** includes the **DATE** and **TIME** fields, plus a minimum of six positions for seconds and an optional **WITH TIME ZONE** qualifier.
- **INTERVAL** specifies a relative value that can be used to increment or decrement a value of a date, time or timestamp.

WeChat: cstutorcs

Assignment Project Exam Help

- **Boolean type**: has the values of **TRUE** or **FALSE**.
- The **CREATE DOMAIN** statement is used to create a domain that is essentially a specific data type.

Email: tutores@f63.com

QQ: 749389476

```
CREATE DOMAIN domain_name AS data_type  
[default expression] [constraint,...,constraint];
```

https://tutores.com

**Example:** `CREATE DOMAIN ssn_type AS CHAR(9);`

## 程序代写代做 CS编程辅导 Attribute Constraints

- The following constraints are specified in SQL.

**NOT NULL:** specify that NULL is not allowed for an attribute.

**DEFAULT:** set a default value for an attribute.

**CHECK:** limit the values taken from the domain of an attribute.

**UNIQUE:** ensure that uniqueness of the values for an attribute or a set of attributes in a table.

**PRIMARY KEY:** uniquely identify each tuple in a table.

**FOREIGN KEY:** enforce referential integrity between two tables.

**INDEX:** provides accelerated access to the rows of table.

程序代写代做 CS编程辅导

## Attribute Constraints – Not Null, Default and Check

```
CREATE TABLE COURSE  
(No VARCHAR(10) PRIMARY KEY,  
  Cname VARCHAR(50) NOT NULL,  
  Unit SMALLINT NOT NULL Default 6);
```

WeChat: cstutorcs

```
CREATE TABLE ENROL  
(StudentID INT NOT NULL CHECK (StudentID > 0),  
  CourseNo VARCHAR(20) NOT NULL,  
  Semester VARCHAR(50) NOT NULL,  
  Status VARCHAR(50),  
  ...);
```

Assignment Project Exam Help

Email: tutores@163.com

QQ: 749389476

- If we don't want to have missing and unknown data, we can specify **NOT NULL** for attributes to forbid NULL values.
- Unit of any new tuple in COURSE is set to 6 if no explicit value is provided.
- **CHECK()** for StudentID excludes the student IDs such as 0 and -37.

<https://tutores.com>

程序代写代做 CS编程辅导

## Attribute Constraints – Unique and Primary Key

```
CREATE TABLE COURSE  
(No VARCHAR(20) PRIMARY KEY,  
Cname VARCHAR(50) UNIQUE,  
Unit SMALLINT NOT NULL Default 6);
```

WeChat: cstutorcs

```
CREATE TABLE ENROL  
(StudentID INT NOT NULL CHECK (StudentID>0),  
CourseNo VARCHAR(20) NOT NULL,  
Semester VARCHAR(50) NOT NULL,  
Status VARCHAR(50),  
PRIMARY KEY (StudentID, CourseNo, Semester),  
...);
```

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

https://tutorcs.com

- If a primary key contains only one attribute, **PRIMARY KEY** can be defined as an attribute constraint (e.g., in COURSE); otherwise it is defined as a table constraint (e.g., in ENROL).
- **PRIMARY KEY** specifies a key while **UNIQUE** specifies additional keys.

程序代写代做 CS编程辅导

## Attribute Constraints – Foreign Key

```
CREATE TABLE STUDENT  
(  
  StudentID  
  Name VARCHAR  
  DoB Date,  
  Email VARCHAR(100));
```

WeChat: cstutorcs

```
CREATE TABLE COURSE  
(  
  No VARCHAR(20) PRIMARY KEY,  
  Cname VARCHAR(50),  
  Unit SMALLINT);
```

- Every StudentID appearing in ENROL must exist in STUDENT.

Email: tutorms@163.com

```
CREATE TABLE ENROL  
(  
  StudentID INT,
```

- Every CourseNo appearing in ENROL must exist in COURSE.

QQ: 749389476

```
  CourseNo VARCHAR(20),  
  Semester VARCHAR(50),  
  Status VARCHAR(50));
```

https://tutorms.com

程序代写代做 CS编程辅导

## Attribute Constraints – Foreign Key

```
CREATE TABLE STUDENT
( StudentID PRIMARY KEY,
  Name VARCHAR(50),
  DoB Date,
  Email VARCHAR(100));
```

WeChat: cstutorcs

```
CREATE TABLE COURSE
( No VARCHAR(20) PRIMARY KEY,
  Cname VARCHAR(50),
  Unit SMALLINT);
```

- StudentID in ENROL references StudentID in STUDENT.
- CourseNo in ENROL references No in COURSE.

```
CREATE TABLE ENROL
( StudentID INT,
  CourseNo VARCHAR(20),
  Semester VARCHAR(50),
  Status VARCHAR(50),
  FOREIGN KEY(StudentID) REFERENCES STUDENT(StudentID),
  FOREIGN KEY(CourseNo) REFERENCES COURSE(No));
```

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导

## Attribute Constraints – Foreign Key

CREATE TABLE ENROL

( **StudentID**

**CourseNo**

VA

Semester VA

Status VARCHAR(50),

FOREIGN KEY (StudentID) REFERENCES STUDENT(StudentID),

FOREIGN KEY (CourseNo) REFERENCES COURSE(No));

Assignment Project Exam Help

CREATE TABLE STUDENT

( **StudentID**

Name VARCHAR(50),

DoB Date,

Email VARCHAR(100));

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

<https://tutorcs.com>

• Enrol can be before STUDENT and

COURSE?

**Answer:** No. ENROL has the foreign keys that reference STUDENT and COURSE.

CREATE TABLE COURSE

( **No** VARCHAR(20) PRIMARY KEY,

Cname VARCHAR(50),

Unit SMALLINT);

## 程序代写代做 CS编程辅导 Attribute Constraints – Index

- Indexes are used for queries based on columns other than the primary key.

```
CREATE TABLE CUSTOMER  
(CustomerID INT NOT NULL,
```

```
  Name VARCHAR(50) NOT NULL,
```

```
  DOB DATE NOT NULL,
```

```
  Address VARCHAR(80),
```

```
  Phone INT CHECK (Phone > 0),
```

```
  PRIMARY KEY (CustomerID));
```

```
CREATE INDEX index1 ON CUSTOMER (Name, DOB);
```

```
CREATE UNIQUE INDEX index2 ON CUSTOMER (Phone);
```

程序代写代做 CS编程辅导

## Data Definition Language – Alter and Drop Table

- The **ALTER TABLE** statement is used to modify an existing relation schema, including:

- changing the name of a table;
- adding or dropping an attribute;
- changing the definition of an attribute;
- adding or dropping table constraints.

WeChat: cstutorcs

Assignment Project Exam Help

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

- The **DROP TABLE** statement is used to remove an existing relation schema from a database schema.

<https://tutorcs.com>

程序代写代做 CS编程辅导

## Data Definition Language – Alter and Drop Table

- Add a NOT NULL constraint:

```
ALTER TABLE CUSTOMER ALTER COLUMN Address SET NOT NULL;
```

- Add a UNIQUE constraint:

```
ALTER TABLE CUSTOMER ADD UNIQUE(Phone);
```

- Add a check() constraint:

```
ALTER TABLE CUSTOMER  
ADD CONSTRAINT positive_id CHECK (CustomerId > 0);
```

- Add a Foreign Key constraint:

```
ALTER TABLE ENROL  
ADD FOREIGN KEY(StudentID) REFERENCES Student(StudentID);
```

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导

## Data Definition Language – Alter and Drop Table

- Add an attribute EMAIL to the table CUSTOMER:

```
ALTER TABLE CUSTOMER ADD Email VARCHAR(100);
```

- Drop the attribute EMAIL in the table CUSTOMER:

```
ALTER TABLE CUSTOMER DROP COLUMN Email;
```

- Drop the table ENROL;

```
DROP TABLE ENROL;
```

- Drop the table CUSTOMER (if exists):

```
DROP TABLE IF EXISTS CUSTOMER;
```
